

Recommendation 387
Reactivation of H-Canyon

Background

Changing national security needs has led the U.S. Government to reactivate H-Canyon because of its nationally unique capacity. This represents a second major shift in the mission and operations of the Savannah River Site (SRS).

Recommendation

The Citizens Advisory Board (CAB) of the SRS recommends that the CAB receive briefings on the following aspects of isotope recovery in H-Canyon:

1. The potential environmental effects of isotope recovery.
2. The impact of isotope recovery on the overall cleanup plan.
3. Any other information deemed necessary.
