

SRS Citizen's Advisory Board

Recommendation No. 21

May 14, 1996

Old F Area Seepage Basin

The SRS Citizens Advisory Board thanks SRS for the review of its plans to remediate the Old F-Area Seepage Basin. As the primary action plan for the Old F-Area Seepage Basin, and because it is in the Industrial Zone, the Board recommends that the Department of Energy, Savannah River Site:

Grout and cap in situ basin top soils and ditchline soils; control access to Basin pipeline soils; dispose of Basin vegetation in the SRS Burial Grounds; and request alternative concentration and mixing zone (ACL/MZ) limits from the State of South Carolina for the cleanup of contaminated Basin groundwater.

Agency Responses
