

SRS Citizen's Advisory Board

Recommendation No. 26

September 24, 1996

Spent Nuclear Fuel Options

The Savannah River Site Citizens Advisory Board strongly recommends that the Department of Energy publish a comparison of chemical processing to the alternatives covered in the Technical Strategy for the Treatment, Packaging and Disposal of Aluminum-Based Spent Nuclear Fuel (June 1996). We request that such a study be made available to the CAB and stakeholders within 30 days.

The CAB further recommends that the chemical processing alternative be incorporated as an option in the Ten Year Plan, and also as one of the viable alternatives in the Site Specific Spent Nuclear Fuel Environmental Impact Statement.
